Component-focused frontend developer with production TypeScript, Vue, React and Storybook experience building WCAG 2.1-compliant, multi-theme design systems for enterprise clients. Skilled at translating Figma designs into pixel-perfect component libraries, owning implementation, documentation, and cross-theme testing end-to-end.

Agency background working client-facing across enterprise accounts, comfortable in daily standups, delivering responsive cross-browser implementations to spec, and actively integrating AI-assisted workflows including Claude Code into component development practice.

WORK EXPERIENCE

The MTM Agency (IDHL Group)

Southampton, UK

Frontend Web Developer

Sep 2024 – Present

- Architected and maintain a mobile-first multi-theme Storybook component library — TypeScript prop contracts, Tailwind CSS utility styling, CSS custom property token system supporting multiple brand themes, and WCAG 2.1-compliant markup with ARIA attributes and keyboard navigation — shipped as a shared package consumed across enterprise client projects.
- Built a design token visualiser for a brand redesign, mapping design decisions directly to coded CSS custom property variables and validating token output across multiple brand themes — owning the system end-to-end from token definition to rendered component output.
- Client-facing throughout — participate in daily client standups, gather and clarify requirements directly from stakeholders across accounts including INEOS, NHBC (BigCommerce), em-trak (WooCommerce), and Bizzabo, and translate briefs into technical solutions with documented component APIs and JSDoc comments for cross-team consumption.
- Designed and shipped an event discovery experience for NHBC end-to-end — session filtering, speaker search, and scheduling views — collaborating with designers on Figma handoff and with backend engineers on API contracts and data-fetching strategy to integrate the Bizzabo API across hundreds of sessions.
- Integrated AI-assisted development workflows into daily practice — using Claude Code for component scaffolding and documentation; built an AI ticket specification agent at a Microsoft Copilot Studio hackathon, raising team awareness of automated developer workflows.
- Maintained Azure DevOps CI/CD pipelines with PR-based branching workflows, structured code reviews, and Playwright E2E suites in Docker — enforcing test gates on every deployment to maintain release stability across staging and production environments.

Apollo Fire Detectors Ltd

Havant, UK

Junior Software Engineer (Part-Time)

Sep 2023 – Sep 2024

- Owned frontend features in a production React/TypeScript application — building and refactoring component architecture, improving UX flows, and shipping to internal users on a continuous release cycle.
- Stabilised CI/CD pipelines by hardening the Playwright test suite — replacing fragile selectors and adding structured assertions to eliminate flaky tests.

Apollo Fire Detectors Ltd

Havant, UK

Junior Software Engineer

Oct 2022 – Aug 2023

- Built a Python system for real-time serial communication with safety-critical hardware — binary protocol parsing, state machine logic, and full pytest/BDD test coverage with 100% pass rate across 30+ tests.
- Reduced attack surface by 15% through embedded security hardening; documented threat model via UML diagrams.
- Worked within safety-critical regulatory frameworks (EN 54), applying rigorous documentation and testing standards relevant to certified product development.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, PHP, SQL, HTML5, CSS3/SCSS

Frontend: React, Vue.js, Storybook, Tailwind CSS, Nuxt.js

Backend & Infrastructure: Node.js, Express.js, Python, PHP, PostgreSQL, MySQL, Docker, AWS, Azure DevOps, GitHub Actions

Testing & APIs: Playwright (E2E), pytest, behave (BDD), REST APIs, OAuth/OIDC (Okta)

CMS & E-commerce: WordPress, WooCommerce, BigCommerce, Kontent.AI, Umbraco

Tools: Figma, Git, CSS Custom Properties, Agile/Scrum, AI coding assistants (GitHub Copilot, Claude Code)

EDUCATION

University of Portsmouth

BSc Software Engineering; First Class Honours

Portsmouth, UK

Sep 2020 – Jul 2024

- School of Computing Project Excellence Award & Highest Final Year Course Average.
- Dissertation: Trained and benchmarked YOLOv5, YOLOv8, and Faster R-CNN on aerial datasets.
- Selected to represent UoP at the UK & Ireland Programming Contest (UKIEPC) for three consecutive years (2021–23).

PROJECTS

- **Ticket Specification Agent:** Built an AI-powered agent using Microsoft Copilot Studio that auto-generates structured ticket specifications from natural language input, reducing ambiguity in developer handoff.
